Appendix B
INTERVIEW SCHEDULES

Adolescent Interview Schedule (1st interview)

1. MILIEU
   a) Can you tell me how long you have been at Barrett now for?
   b) What's it like for you to live here at Barrett?
   c) What have been the most positive and negative experiences since you have been here?
   d) Tell me how you have found the staff at Barrett.
   e) How helpful do you think living on the Ward has been?
   f) If you had to describe Barrett to a stranger, what would you say?

2. RECOVERY
   a) Tell me a bit about why you are here.
   b) Has your stay at Barrett helped you getting back on track with your life? If so/not, how?
   c) How do you think life would be like if you were not at Barrett?

3. SCHOOL
   a) Can you tell me a bit about how the Barrett school has been for you?
   b) How does the Barrett school compare with your past school experiences?

4. PEERS
   a) Tell me a bit about what it's like to live with other teenagers.
   b) How have you found the 'code blacks' at Barrett?
   c) What is it like for you when some of the other kids aren't doing so well?
   d) Do you see any advantages in having the teenagers living together? If so/not, how?

5. PARENTS/FAMILY
   a) What's it been like to see less of your family since coming to Barrett?
   b) How do you think your family feels about your stay in Barrett?
   c) Has your stay at Barrett changed anything in your family? If so/not, how?

6. SELF CONCEPT
   a) How would you describe yourself as a person?
   b) Has coming to Barrett changed the way you think or feel about yourself? If so/not, how?
   c) How do you see yourself in say, six months?

7. FINAL QUESTIONS
   a) If there was one thing you would change about Barrett, what would that be?
   b) If there was one thing you would keep about Barrett, what would that be?
   c) Is there anything else you haven't told me that might be helpful for me to know?
Adolescent Interview Schedule

(2nd – 4th interviews)

1. When you think about your experiences since our last interview, what stand out for you?
   Prompts: Relational, emotional, experiential domains.

2. The exploration and clarification of significant themes derived from the previous interview.
   Prompts: Relational, emotional, experiential domains.

3. Photo exploration:
   a. What was it like using the camera?
   b. ‘Tell me a bit about the photos you have taken’...
   c. What stands out?
   d. Anything especially negative?
   e. Anything especially positive?
   f. What was that like for you?
   g. How has that changed since last time we spoke?
   Prompts: Relational, emotional, experiential domains.

4. Is there anything that feels a bit unfinished for you that you would like to talk about?

Final question of the study during 4th or final interview:

5. Now that we are at the end of the interviews, is there anything you would like to add about our time together or about the study?
Staff Interview Schedule
(Single interview)

1. Can you tell me how long you have been working at Barrett for?

2. If you had to describe the Barrett Centre to a stranger, what would you say?

3. When you think about the last X years, what experiences *stand out* for you personally?
   a. Prompts: Positive and negative experiences
   b. Personal meaning of particular events

4. What do you think are the most *positive* experiences the adolescents have at Barrett?
   a. Prompts: Staff/adolescent relations
   b. The recovery process
   c. Peers
   d. Specific programs

5. What do you think are the most *negative* experiences the adolescents have at Barrett?
   b. Code blacks
   c. Contagion effect of peers
   d. Missing family

6. What thoughts come up for you when you consider the overall treatment process for the adolescents?

7. What have you noticed about any processes of change for the adolescents while they are at Barrett?

8. How do you think life would be like for the adolescents if they were *not* at Barrett?

9. Is there anything else you haven’t told me that might be helpful for me to know?
Staff Focus Group Discussion Questions

1. Do you get a sense of if, or how, the inpatient experience is different between male and female adolescents?

2. The school has come up a lot in the adolescent interviews. Can you say a bit from your perspective about the impact of the Barrett school on the adolescents’ journey of recovery?

3. The topic of supportive relationships has been brought up in both staff and adolescents in the previous interviews, where the staff take on parental roles with the kids. I’m wondering if you have noticed any difficulties or challenges in any of the roles the staff may have with the adolescents?

4. The topic of developmental tasks for the adolescents has also arisen in the interviews. Could you say a bit about how your particular profession might contribute to addressing the developmental tasks of the adolescents?

5. Some staff have shared how stressful it can sometimes be working at the Barrett Unit. I’m wondering from your perspective what specific organisational, emotional or diagnostic difficulties might impel staff to leave BAC and look for work elsewhere.

Appendix D
Letter to BAC nurses

Thursday 7th October

Dear Nursing staff,

We often hear about the need for research here at Barrett, particularly as we are an extended unit.

Some time back, [деleted] graciously gave me the ok for some research here exploring the adolescents' experiences of inpatient life over a period of time. After almost 2 years of preparation, the time has come. The ethics approval was time consuming as well as nutting out stuff with UQ.

Both [деleted] and [деleted] have given the ok.

The research involves interviewing all adolescents who are inpatients about their experiences here at Barrett. I hope to get a picture of the recovery process, what is helpful, unhelpful etc etc. I have included the information sheets to give you some idea of what the study is about and what will be given out. At the Case Conferences, it will be decided if a particular adolescent is suitable (almost all will be unless there is significant impairment).

In order for the study to go ahead, I need to ask 2 things of the nursing staff:

1) Because I am a staff member, I cannot approach the kids themselves. I need the CC to approach the adolescent and if under 18, their parent(s) as well to see if they would like to be involved. I am happy to explain more details when I see you. Involvement is voluntary, but I cannot approach them myself due to any perceived 'coercion'.

2) Secondly, I need to distance myself from a therapeutic role for several months. This includes the family therapy. However, I don't need to withdraw completely. I am suggesting that the CC's take any family sessions, with the exceptions that if there is a particularly tricky case, I will have more involvement. I will give the CC one on one supervision as well as one-way mirror supervision during the data collection phase which will last around 9 mths or so. It will be a great opportunity for any nurse to get acquainted with family therapy, and the fact that it will go over several months is quite unique. Rarely do you find any family therapy training that last more than a couple of days! I am happy to give materials, discuss cases, and give some fairly intense family supervision over a period of time. I have quite a lot of material these days, and am keen to share it.

If you have an adolescent who has no need for family work, it is easier. If you do, by offering your help in this regard, you will be helping me do some research that really has yet to be done in Australia. The above is voluntary, but I do hope you will take up the opportunity - particularly as the data will be in before we move to Redlands and it may prove very useful in how we do things over there.

If you have any concerns or questions, please see me.

Regards,

David Ward
Social Worker

WMSBHSD RESEARCH PROJECT
PARTICIPANT INFORMATION SHEET
(Adolescent)

Title of Research: “The long sleep-over: an exploration of how consumers, parents and staff navigate life in an adolescent psychiatric unit”

Research Project Contact
Name: David Ward, Social Worker
Address: Barrett Adolescent Centre, The Park, Orford Drive, Wacol 4076
Telephone:
Email:

Description of Research Project

The purpose of this study is to better understand the experience of living in a long-term adolescent unit such as Barrett. The aim is to appreciate from an adolescent's perspective what it is like to live here for such a long period. This project is for David Ward’s PhD thesis at the University of Queensland.

Participation

Your participation in this project is totally voluntary. If you do agree to participate, you can withdraw from participation at any time during the project without comment or penalty. Your decision to participate will in no way impact upon your current or future relationship with staff at Barrett or The Park.

Your part in the project involves answering David’s questions about what it’s like to live at the Barrett Adolescent Unit. David will spend some time interviewing you about any positive or negative experiences you have had since coming to Barrett. The interviews will be audio-taped and later transcribed into words. There are no right or wrong answers. David is curious about what you think and feel about living on the Ward, especially given that some adolescents live at Barrett for quite some time.

All together, there will be four interviews over twelve months. If you are not here that long, that’s ok. David would still like to interview you. The interviews will take about an hour or however you would like to talk for.

Expected benefits

It is not expected that your involvement in this project will have direct benefits for you apart from the satisfaction of being involved. However, your involvement will help us get a better understanding of what it is like for adolescents to live in a long-stay residential unit such as Barrett. This information might help future consumers of the Barrett Unit.

Risks

There are no risks beyond normal day-to-day living associated with your participation in this project. We are aware that this could be a sensitive topic for you though, and we will completely respect your feelings throughout our involvement with you. However, should your participation in the project at any time cause distress, you have the opportunity to speak to David at any point. If you feel you need to speak to someone other than David, your case co-ordinator is aware that they need to be available if you would like to speak to them. Again, you are free to withdraw at any stage.
Confidentiality

The taped interviews that you complete with David will be written out and personal details like your name will be changed. The only people who will have access to the information will be David himself and his research supervisors. However, your real names will not be used. If photographs are taken for later interviews, they will be changed to protect your privacy. No-one will find out from this study that you are staying at Barrett.

Also, none of the staff at Barrett will know the author of the content in the interviews.

Because the study will be looking at what it is like for you at Barrett, this means that your personal history and your family history are not the focus.

Also, David is a researcher in this study. While he will still be involved in many activities at Barrett, he will not provide any personal counselling or therapy during the time of the interviews. He will still be doing a variety of jobs at Barrett, but during the time of the interviews he will not be as available.

Consent to Participate

If you have considered the study and would like to be involved, we need you to sign a written consent form (enclosed) to confirm your agreement to participate. We also need your parent or guardian to sign as well. Once again, you can change your mind and withdraw from the study at any time. Your case co-ordinator will see you again in three or four days to see if you might be interested.

Questions / further information about the project

Please feel free to see David and ask any questions you have.

Concerns / complaints regarding the conduct of the project

WMSBHSD & Qld Health is committed to researcher integrity and the ethical conduct of research projects. However, if you do have any concerns or complaints about the ethical conduct of the project you may contact the Research Ethics Officer on __________________. The Research Ethics Officer is not connected with the research project and can facilitate a resolution to your concern in an impartial manner. Or if you wish, you can contact David’s University supervisors. They are Dr Rob Bland or Dr Peter Newcombe.

You will be given a copy of this Participant Information Sheet and Consent Form to keep for your records.
Title of Research: "The long sleep-over: an exploration of how consumers, parents and staff navigate life in an adolescent psychiatric unit"

Statement of consent

By signing below, you are indicating that you:

• have read and understood the information document regarding this project
• have had any questions answered to your satisfaction
• understand that if you have any additional questions or concerns you can contact David
• understand that you are free to withdraw at any time, without comment or penalty
• should you withdraw, all material from the interviews can still be used for the research
• understand that you can contact the Research Ethics Officer on [contact information] or [contact information] if you have concerns about the ethical conduct of the project.
• agree to participate in the project

**Description of Research Project**

The purpose of this study is to better understand the experience of living in a long-term adolescent unit such as Barrett. The aim is to appreciate from an adolescent's perspective what it is like to live in an inpatient facility for such an extended period.

This project is for David Ward's PhD thesis at the University of Queensland.

**Participation**

Your child’s participation in this project is totally voluntary. However, they cannot participate without your permission. If you do agree to their participation, you cannot withdraw your permission at any time during the project without comment or penalty. Your decision will not influence your current or future relationship with staff at Barrett or The Park.

Your child’s part in the project involves exploring what it's like to live at Barrett Adolescent Unit. David Ward the social worker will spend some time interviewing your child about their experiences they have had since coming to Barrett. This interview will be audio-taped and later transcribed.

The focus of the study is the adolescent’s experience of living at Barrett. Consequently, personal life issues such as family life or family history are not the focus of the research.

All together, there will be four interviews over twelve months. If your child is not here that long, that's ok. David would still like to interview them.

**Expected benefits**

It is not expected that your child's involvement in this project will have direct benefits for you or your child apart from the satisfaction of being involved. However, their involvement will help us get a better understanding of what it is like for adolescents to live in a long-stay residential unit such as Barrett. This information might help future consumers of the Barrett Unit.

**Risks**

There are no risks beyond normal day-to-day living associated with your participation in this project. We are aware that this could be a sensitive topic for them, and we will completely respect their feelings throughout our involvement with them. However, should their participation in the project at any time cause distress, they have the opportunity to speak to David at any point. If you feel they need to speak to someone other than David, their case co-ordinator will be available if...
you would like to speak to them. Again, your child is free to withdraw at any stage.

Confidentiality

The interviews completed will be typed out and personal information like names will be changed. The only people who will have access to the information will be David Ward himself and his research supervisors at the University of Queensland.

However, your child’s real name will not be used. No-one will find out from this study that you have a child at Barrett.

Also, none of the staff at Barrett will know the author of the content in the interviews.

In terms of the content that your child shares with David, it too is confidential and it is up to your child as to whether they want to share the interview content with you. However, in accordance with Barrett policy, should issues of harm surface, (to self or others) the adolescents know that the Team will need to be informed.

Also, David Ward is a researcher in this study. While he will still be involved in many activities at Barrett, he will not provide any personal counselling or therapy during the time of the interviews. He will still be doing a variety of jobs at Barrett, but during the time of the interviews he must keep his roles of researcher and social worker more separate.

Consent to Participate

If you have considered the study and are comfortable with your child being involved, we need you to sign a written consent form (enclosed) to confirm your agreement to participate.

As the child’s guardian, you can change your mind and withdraw your child from the study at any time.

Your child’s case co-ordinator will call you again in three or four days to see if you might be interested.

Questions / further information about the project

Please feel free to see David and ask any questions you have or call him on...

Concerns / complaints regarding the conduct of the project

WMSBHSD & Qld Health is committed to researcher integrity and the ethical conduct of research projects. However, if you do have any concerns or complaints about the ethical conduct of the project you may contact the Research Ethics Officer on... The Research Ethics Officer is not connected with the research project and can facilitate a resolution to your concern in an impartial manner. **Description of Research Project**

The purpose of this study is to better understand the experience of living in a long-term adolescent unit such as Barrett. The aim is to appreciate from an adolescent's perspective what it is like to live in an inpatient facility for such an extended period.

This project is for David Ward's PhD thesis at the University of Queensland.

**Participation**

Your participation in this project is totally voluntary. If you do agree to your participation, you can withdraw your permission at any time during the project without comment or penalty. Your decision will in no way impact upon your current or future relationship with staff at Barrett or The Park.

Your part in the project involves exploring what it's like for the adolescents to live at the Barrett Adolescent Unit. David Ward, the social worker, will spend some time interviewing you about their experiences they have had since coming to Barrett. This interview will be audio-taped and later transcribed.

The focus of the study is the adolescent's experience of living at Barrett. Consequently, your own personal life issues such as family life or family history are not the focus of the research. However, as you have been working at Barrett for some time, your perspective on their inpatient stay will be most valuable for the project.

There is only one interview for the staff. The interview should take around an hour.

**Expected benefits**

It is not expected that your involvement in this project will have direct benefits for you apart from the satisfaction of being involved. However, your involvement will help us get a better understanding of what it is like for the adolescents to live in a long-stay residential unit such as Barrett. This information might help future consumers of the Barrett Unit.

**Risks**

There are no risks beyond normal day-to-day living associated with your participation in this project. We are aware that this could be a sensitive topic for you, and we will completely respect your feelings throughout our involvement with you. However, should your participation in the project at any time cause distress, you have the opportunity to speak to David at any point. If you feel you need to speak to someone other than David, their case co-ordinator will be available if you would like to speak to them, or your professional supervisor. Again, you are free to withdraw at any stage.
The interviews completed will be typed out and personal information like names will be changed. The only people who will have access to the information will be David Ward himself and his research supervisors at the University of Queensland.

However, your real name will not be used.

Also, none of the staff at Barrett will know the author of the content in the interviews.

Also, David Ward is a researcher in this study. While he will still be involved in many activities at Barrett, he will not provide any personal counselling or therapy during the interviews. He will still be doing a variety of jobs at Barrett, but during the time of the interviews he must keep his roles of researcher and social worker separate.

Consent to Participate

If you have considered the study and are comfortable with being involved, we need you to sign a written consent form (enclosed) to confirm your agreement to participate.

You can change your mind and withdraw from the study at any time.

Questions / further information about the project

Please feel free to see David and ask any questions you have or call him on [number]

Concerns / complaints regarding the conduct of the project

WMSBHSD & Qld Health is committed to researcher integrity and the ethical conduct of research projects. However, if you do have any concerns or complaints about the ethical conduct of the project you may contact the Research Ethics Officer on [number]. The Research Ethics Officer is not connected with the research project and can facilitate a resolution to your concern in an impartial manner. Or if you wish, you can contact David's University supervisors. They are Dr Rob Bland [number] or Dr Peter Newcombe [number]

You will be given a copy of this Participant Information Sheet and Consent Form to keep for your records.
Title of Research: "Companionship, Containment and Contagion: The lived experience of adolescents in an inpatient unit."

Statement of consent

By signing below, you are indicating that you:
- have read and understood the information document regarding this project
- have had any questions answered to your satisfaction
- understand that if you have any additional questions or concerns you can contact David Ward on [phone number]
- understand that you can withdraw at any point without penalty
- should you withdraw, material from the interviews can still be used for the research
- understand that you can contact the Research Ethics Officer on [phone number] if you have concerns about the ethical conduct of the project.
